PROFESSIONAL SUMMARY

Cyber Security Engineering student graduating **May 2027** with hands-on experience across cybersecurity tools, Linux/networking, software development, embedded systems, and team leadership; seeking full-time **cybersecurity engineering, SOC, or security analyst roles.**

EDUCATION

Iowa State University – Ames, IA **Anticipated Graduation – May 2027**
Bachelor of Science – Cyber Security Engineering | GPA: 3.29

RELEVANT EXPERIENCE

Iowa State University Foundation – Calling Center **May 2025–Present**
Student Supervisor | *Ames, IA*

- Support weekly operations for teams of **up to 50 student fundraisers** by supervising shifts, coaching performance, resolving day-to-day issues, and reinforcing fundraising practices.
- Train cohorts of **up to 40 fundraisers** by delivering onboarding, ongoing feedback, and reusable training resources that promote consistent performance.
- Improve visibility into performance for 40 fundraisers by maintaining **Excel-based metrics**, reference materials, and training resources.
- Support technical continuity by troubleshooting routine **IT/network issues** and leading weekly **tool-development knowledge-sharing sessions**.
- Represent the **Iowa State University Foundation** at Destination Iowa State, Forever True Day, and Order of the Knoll activities, supporting tabling, outreach, and attendee engagement.

PROJECTS

LLM Agentic System for Circuit Card Design | CPRE 4910/4920, Iowa State University **Aug 2026–May 2027**
Project Planning / Scheduling Lead | ***In Progress*** | ***Python, Linux, Docker, LLMs, Agentic AI, Circuit Card Design***

- Coordinate project planning and scheduling for a **five-person, year-long senior design team**, monitoring deadlines, maintaining the shared task tracker and team records, and helping keep work aligned across the team.
- Support development and research for an **agentic AI system** intended to identify design requirements and constraints, review prior designs and online specifications, and provide early-stage circuit-card design suggestions.
- Help plan a **cloud-based Docker deployment** and evaluation on an image-sensor embedded machine-learning hardware design, with weekly industry-client collaboration.

Autonomous Archaeology Survey Rover | CPRE 2880, Iowa State University **Jan 2026–May 2026**
GUI Development | ***System Design*** | ***Testing*** | ***Documentation*** | ***Python, Embedded C, Sensors, UART/WiFi***

- Improved operator visibility for a **five-person autonomous rover project** by developing GUI components and mapping sensor, navigation, communication, and actuator flows into system designs and sketches.
- Supported mission validation by creating test-field/system sketches, documenting **Travel and Survey modes**, and testing rover behavior against project requirements.
- Strengthened integration planning by translating requirements into phased work across **movement, sensing, scanning, hazard avoidance, communication, and destination logic**.

PROJECTS (CONTINUED)

Dine-Der | COM S 3090, Iowa State University **Aug 2025–Dec 2025**

Android Front-End* | *UI* | *Testing* | *CI/CD* | *Java, XML, Android Studio, Volley, WebSockets

- Delivered Android front-end functionality for a **four-person team** by building restaurant browsing, admin management, account/navigation, and app-review workflows in Java and XML.
- Enabled real-time client-server interaction by integrating **Volley HTTP requests and WebSocket updates** for reviews, live user counts, and session-related features.
- Contributed **117 unique commits** across archived project history by implementing UI/networking features, supporting CI/CD troubleshooting, testing functionality, and documenting the system.

Subway Menu Grabber | SE 186, Iowa State University **Jan 2024–May 2024**

Front-End / UI Contributor* | *HTML, C, GitHub, VS Code, Cygwin

- Contributed user-facing website/UI features for a **four-person project** by creating multi-page HTML resources for ordering guidance, location information, and tutorials.
- Helped deliver an end-to-end ordering workflow by pairing interface work with a **C/Cygwin terminal application** for menu browsing, customization, checkout, price, and calorie calculations.

LEADERSHIP & INVOLVEMENT

Hacking and Cyber Security Club (HACC) – Member **Aug 2025–Present**

Central Asian Student Association (CASA) – Founding Contributor **Jan 2026–Present**

***Former Social Media Manager**, Jan 2026–Sep 2026*

Hackathon Club – Member **Jan 2026–Present**

TECHNICAL SKILLS

Cybersecurity – Linux security, Nmap, Wireshark, Splunk, pfSense, DNS/BIND, LDAP, HTTPS/TLS, web security, vulnerability/CVE analysis, security monitoring, firewalling, authentication, security logging, IT/network troubleshooting

Programming and Development – Java, C, Python, HTML, XML, Bash, Verilog, LEGv8 Assembly

Networking and Systems – HTTP/REST, WebSockets, Volley, Docker, UART, interrupts, ADC, sensors, embedded systems, FPGA/digital logic

Tools – Git, GitHub, Android Studio, Visual Studio Code, Cygwin, Microsoft Excel

Languages – Uzbek (Fluent), Russian (Fluent), English (Fluent), Turkish (Beginner)

SELECTED COURSEWORK

Cybersecurity Engineering – Linux security, Nmap, Wireshark, Splunk, pfSense, DNS/BIND, LDAP, HTTPS/TLS, web security, CVE/vulnerability analysis, firewalling, authentication, and security logging.

Computer Science – Data structures and algorithms in Java, Linux operating-system administration, computer architecture, C, and LEGv8 assembly.

Embedded Systems / Digital Logic – Embedded C, UART and interrupts, ADC/IR/PING sensing, servo control, Verilog, FPGA design, counters, and register files.
